Project Title/ID: AMJAD's Architectural Glass Processing Plant

Project Type: Indirect

Sector: Manufacture

Project Concept:

The project consists of establishing a fully equipped plant in Kuwait for the processing of architectural glass. The plant will be built on a 12000 m² ground in an industrial area that is suitable for this purpose. The manufacturing process adopts modern technologies which deliver large capacity and high quality glass products, in par with international manufacturing standards. The capacity (total processed glass) of the plant is expected to reach 1.65 million m² annually with 3 shifts.

Economic Benefits:

The main product of the plant shall be insulated glass of high thermal performance. This will result in significant savings in cooling loads and total energy consumption of buildings.

Job Creation for Kuwait Citizens: Due to the automation of the production process through information technology, more skilled staff would be required in this area, which is predicted to be 27 indirect labor (5 of them are Kuwaiti) and 33 direct labor (3 of them are Kuwaiti).

Education & Training: Optimized operation of the different production lines shall take place in the plant that would result in a good level of skill. Training under the supervision of experienced foreign experts would establish a good base for sustainable growth.

Estimated Investment

The initial cost of the Equipments required is **KD 2.7 million**

Approval date

December 1st, 2009
